PROFESSIONAL SUMMARY

Computer Science undergraduate (Bennett University, CGPA 8.74) with hands-on experience building full-stack MERN applications and deep learning pipelines, including a Vision-Encoder-Decoder model achieving 90.5% accuracy on chart-to-text conversion. Proficient in React, Node.js, PyTorch, and workflow automation (n8n, LLM integrations). Solved 250+ problems on LeetCode; NVIDIA-certified in NLP & LLMs.

EDUCATION

Bennett University <i>B.Tech, Computer Science and Engineering</i>	2024 – 2028 CGPA: 8.74 (2nd Year)
Dayawati Dharmavira Public School <i>CBSE Class 12</i>	2023 – 2024 Percentage: 85.40%
Dayawati Dharmavira Public School <i>CBSE Class 10</i>	2021 – 2022 Percentage: 96.60%

PERSONAL PROJECTS

SPECTRA — GraphToAudio — Vision-Encoder-Decoder for Chart-to-Text Conversion

Developed an end-to-end Vision-Encoder-Decoder architecture (Donut-based) utilizing a Swin Transformer Encoder and BART Decoder for automated chart-to-text conversion.

- Engineered specialized "**Expert Models**" for distinct data visualizations (VBAR, HBAR, and Dot-Line) to improve query accuracy across diverse chart types.
- Optimized image processing pipeline to force **720×720 HD resolution**, significantly enhancing OCR capabilities and text readability on chart axes.
- Achieved a maximum **90.5% accuracy** on the dot-line dataset from the PlotQA Dataset.

Calorie.io — MERN Full-Stack Fitness Tracker

- Built a MERN-based fitness tracking platform with secure JWT authentication and role-based access, supporting **1,000+ user profiles** with persistent calorie and macro tracking.
- Optimized React state management using Context API and memoization, reducing unnecessary re-renders by **~25%** (measured via React DevTools profiler).
- Designed and implemented **12 RESTful APIs** with Express.js and MongoDB, covering authentication, activity logging, and analytics with structured validation and error handling.
 - Deployed on Netlify and Render — [LIVE DEMO](#)

Tech: MongoDB, Express.js, React.js, Node.js

Fitness Tracker — Java, JavaFX and MySQL

- Designed a normalized MySQL schema handling 5+ relational entities; optimized query execution time by **~30%** through indexing and query restructuring, and visualized calorie trends using JavaFX charts.
- Implemented a BMI calculator and calorie recommendation engine based on user profile inputs.
- Optimized **10+ queries** for faster data retrieval across the normalized schema.

Tech: Java, JavaFX, MySQL

N8N WORKFLOWS & AUTOMATION

Gmail Auto-Reply Bot

- Built an intelligent customer-support automation that processes incoming emails, classifies priority level (low to high), and sends contextual AI-generated responses using Google Gemini.
- Reduced manual email handling by **~12 hrs/week** through smart prioritization and AI-powered responses.

Tools: Gmail API, Google Gemini, Google Sheets, LLM Chain

Telegram News Bot

- Automated a news aggregation system that fetches the latest tech updates from KDnuggets and TechRadar RSS feeds, filters relevant content, and delivers curated news to Telegram channels.
- Delivered real-time curated updates, saving an estimated **~8 hrs/week** of manual news tracking.

Tools: RSS Feeds, KDnuggets API, TechRadar RSS, Telegram Bot API

TECHNICAL SKILLS

- **Languages:** Python, Java, C++
- **Web Development:** React.js, Node.js, Express.js, FastAPI
- **Machine Learning:** PyTorch, TensorFlow, Scikit-learn, NumPy, Pandas, Matplotlib, Seaborn
- **Databases:** MySQL
- **Developer Tools:** Git, GitHub, VS Code, IntelliJ IDEA, Postman
- **Platforms:** Netlify, Render
- **Areas of Interest:** Competitive Programming, Web Development, AI Workflow Automation (n8n)

ACHIEVEMENTS & CERTIFICATIONS

- Solved **250+ DSA problems** on LeetCode; maintaining 50-day and 100-day streak badges for the years 2025 and 2026.
- Completed **NVIDIA's NLP & LLMs certification** — covering embeddings, transformers, and model deployment workflows.
- Secured **67/100** (Elite) marks in Software Engineering Exam conducted by **NPTEL**
